## **WEBINAR: Find Money in the Water System Budget: Internal Energy Revolving Funds**

**Tuesday, April 12, 2016  
2:00 – 3:00 PM EDT**

This program is made possible under a  
cooperative agreement with EPA.

- [www.efcnetwork.org](http://www.efcnetwork.org)

## Registrants of this webinar

## About the Environmental Finance Center Network (EFCN)

The Environmental Finance Center Network (EFCN) is a university-based organization creating innovative solutions to the difficult how-to-pay issues of environmental protection and improvement. The EFCN works with the public and private sectors to promote sustainable environmental solutions while bolstering efforts to manage costs.

## The Smart Management for Small Water Systems Program

This program is offered free of charge to all who are interested. The Project Team will conduct activities in every state, territory, and the Navajo Nation. All small drinking water systems are eligible to receive free training and technical assistance.

## What We Offer

Individualized technical assistance, workshops, small group support, webinars, eLearning, online tools & resources

- **Environmental Finance Center at University of North Carolina at Chapel Hill**
- Southwest Environmental Finance Center
- **Syracuse University Environmental Finance Center**
- Environmental Finance Center at Wichita State University
- EFC West
- Environmental Finance Center at University of Louisville
- Great Lakes Environmental Finance Center at Cleveland State University
- New England Environmental Finance Center at University of Southern Maine
- American Water Works Association

## Areas of Expertise

- Asset Management
- **Energy Management**
- Meeting Regulatory Compliance
- Fiscal Planning and Rate Setting
- Multi-funding Coordination
- Communications and Decision-making
- Water Loss Reduction
- Working with Other Water Systems
- Financing
- Funding Programs
- Managing Small Utilities in Drought

# UNC

## ENVIRONMENTAL FINANCE CENTER

UNC SCHOOL of GOVERNMENT

*Dedicated to enhancing the ability of governments and other organizations to provide environmental programs and services in fair, effective, and financially sustainable ways through:*

- Applied Research
- Teaching and Outreach
- Program Design and Evaluation

*How you pay for it matters*

Welcome and Logistics

*David Tucker, Glenn Barnes, and Laura Flagg*

How to Pay for Energy Management Projects: Internal Energy Revolving Funds (IERF)

*Glenn Barnes and David Tucker*

Demonstration of the EFC's new Internal Energy Revolving Fund Tool, an Excel-based tool to assist you in setting up and tracking the progress of your Fund

*Alex Clegg*

Question & Answer Session and Wrap-Up

*All*

# Polling Question 1

What kind of drinking water utility do you represent? (*choose one*)

- For-Profit Water Utility
- Local Government (Municipal or County)
- Not-for-Profit / Cooperative / Association
- Other H2O Util. (Authority, District, School, Hotel, etc.)
- Not a Drinking Water Utility

## Polling Question 2

What size drinking water system does your utility operate (by number of people served)? *(choose one)*

- Very Small (500 or fewer people served)
- Small (501 to 3,300 people served)
- Medium (3,301 to 10,000 people served)
- Large or Very Large (10,001 or more people served)
- Not a Drinking Water Utility

## Polling Question 3

For Internal Energy Revolving Funds (IERF), used to finance energy projects at your water utility, have you? (*choose one*)

- Never heard of IERF before now.
- Have heard of IERF but have not used one yet.
- Our utility is currently running an IERF.
- Our utility has finished using an IERF. What do we do next?
- Not a Drinking Water Utility.

# Energy Management for Small Water Systems

## Find Money in the Water System Budget: Internal Energy Revolving Funds

Glenn Barnes and David Tucker, Environmental Finance Center at the  
University of North Carolina at Chapel Hill

[www.efcnetwork.org](http://www.efcnetwork.org)

UNC  
ENVIRONMENTAL FINANCE CENTER

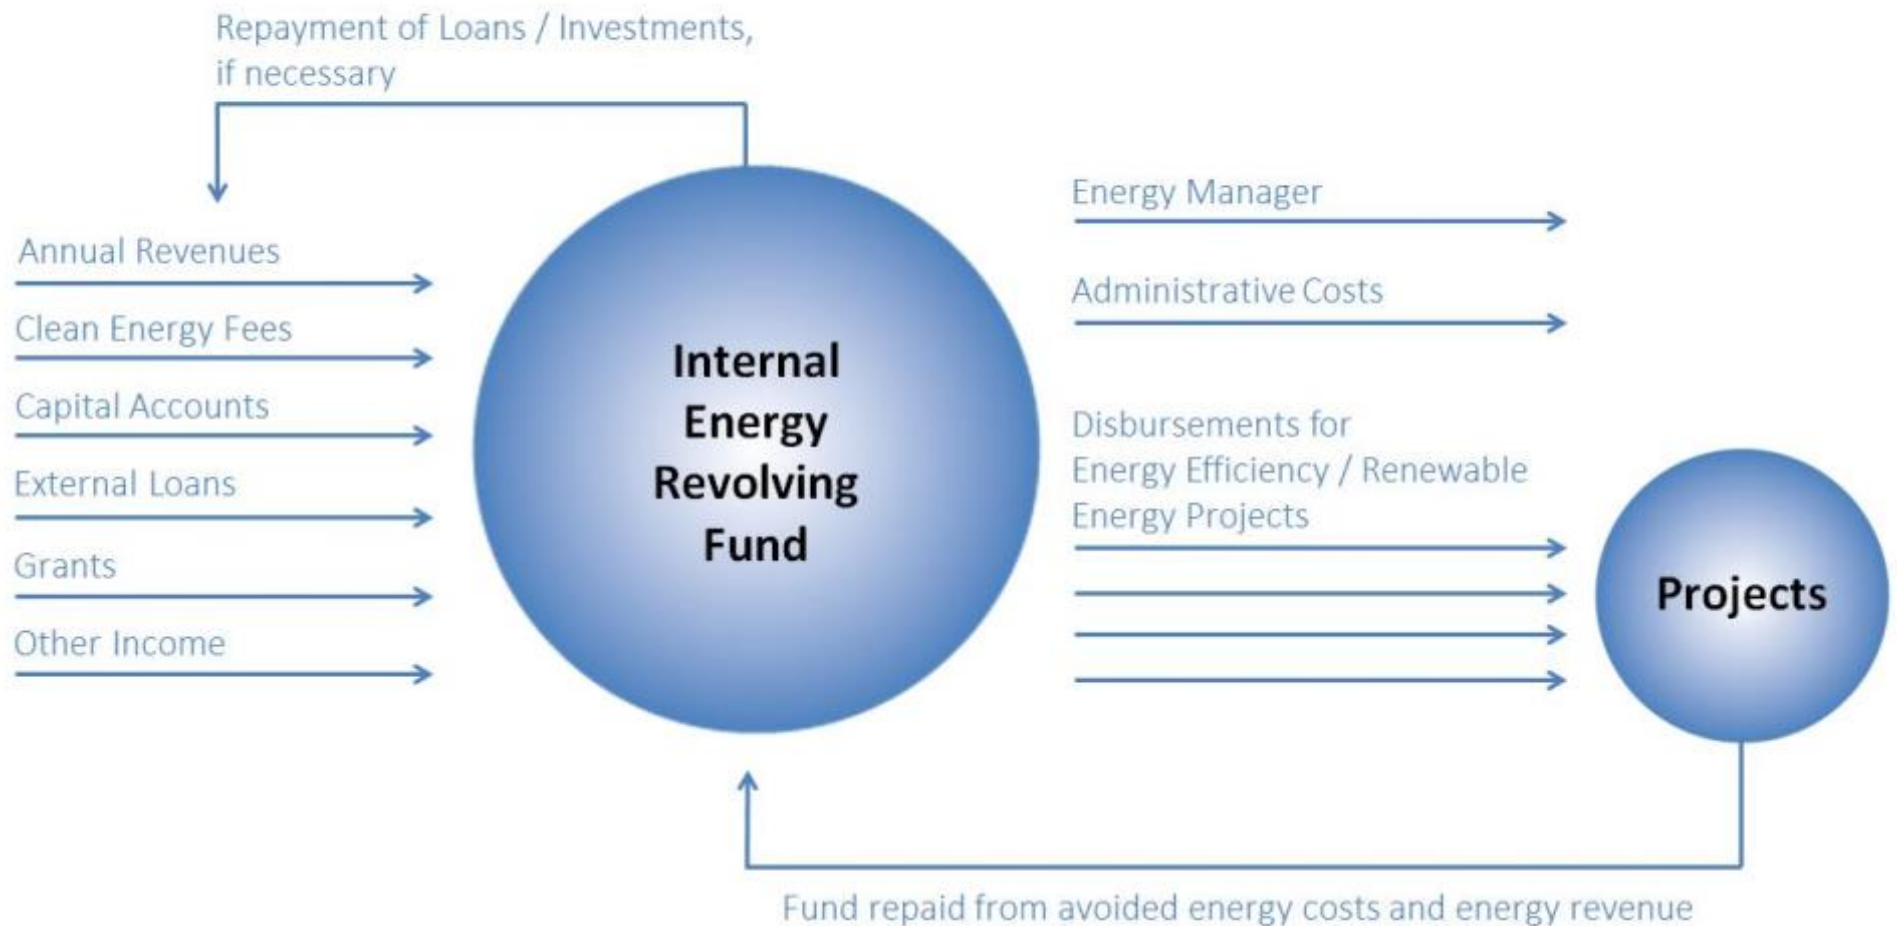

# How a revolving energy fund works

- Capitalized as a “bank” from which water systems can borrow to fund energy efficiency, renewable energy or energy conservation projects.
- Allows water systems to provide a continual stream of funds for energy efficiency improvements without tapping into existing capital cycles.

# Internal Revolving Energy Fund

# What Are “Avoided Costs”?

- And why do you think we use “avoided costs” and not “cost savings”?

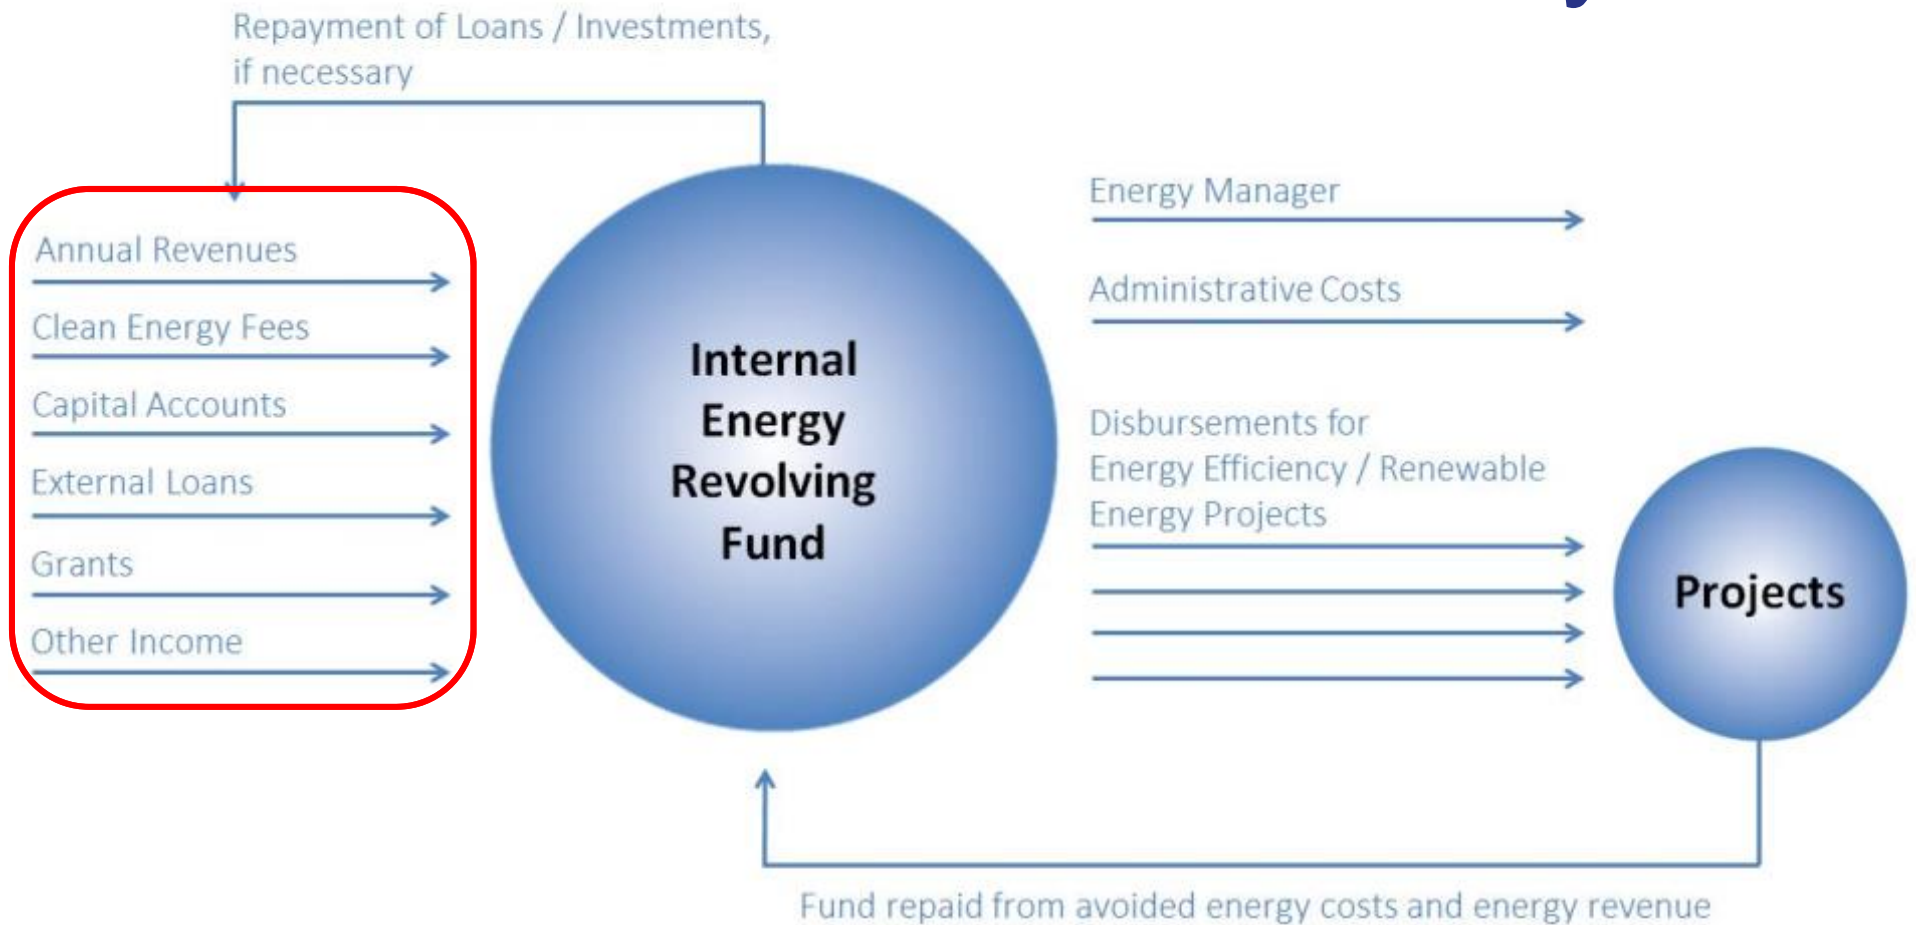

# What is an Energy Upgrade?

- An energy upgrade to water or wastewater system is really just a **capital improvement**
- You can treat energy upgrades just like any other capital improvement

# Establishment: Seed Money

# Establishment: Seed Money

- Revenue from rates & fees
- Unrestricted fund balance
- Capital reserve fund
- ESCO financing
- Grants
- Assessments
- Debt

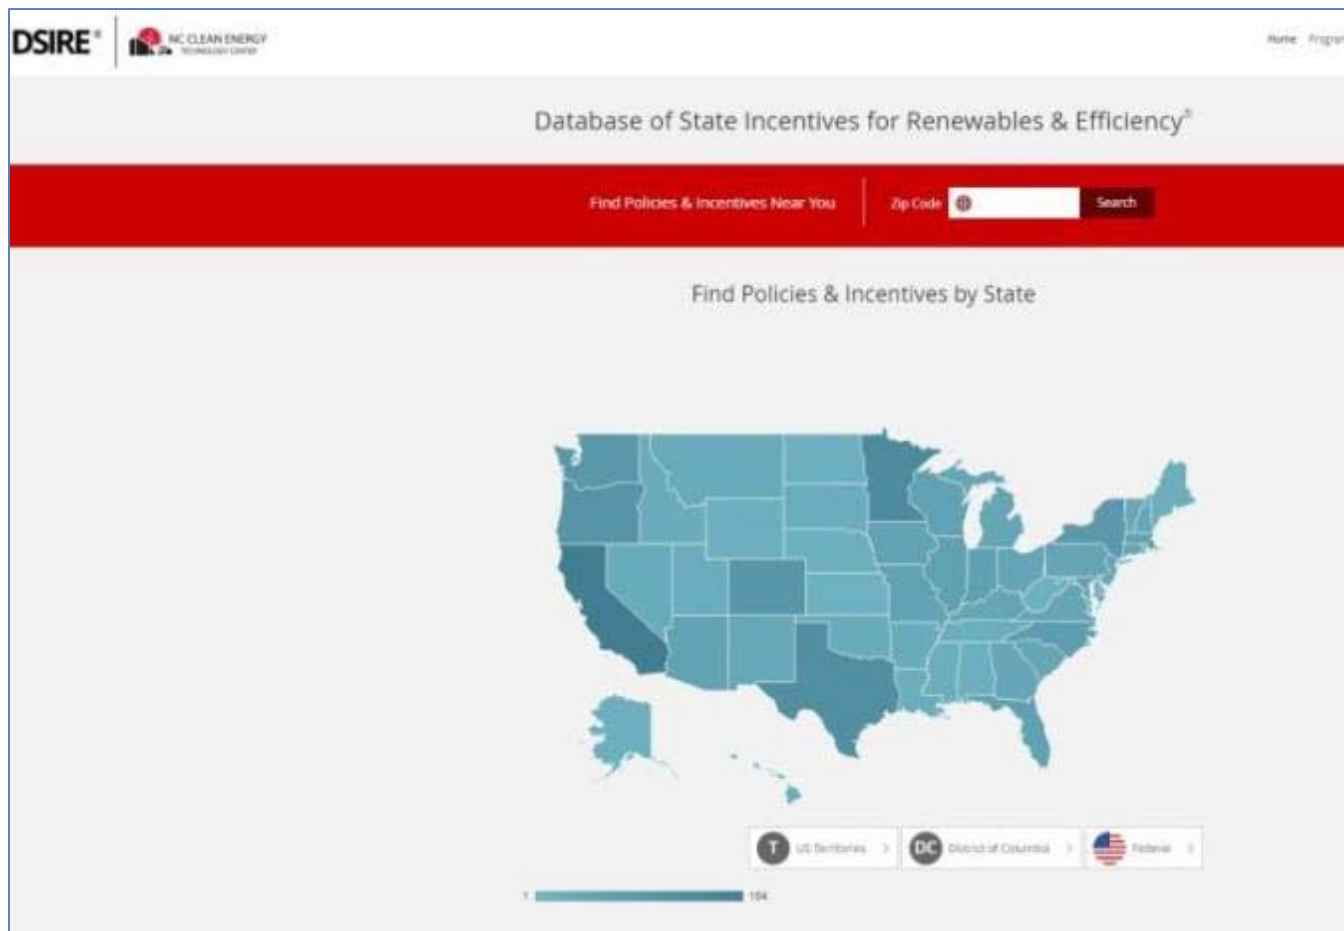

# What is an Energy Upgrade?

- An energy upgrade to a water or wastewater system is also a **special capital improvement**
- As a result, there are special financing options available for energy upgrades

<http://www.dsireusa.org/>

# Establishment: Seed Money

- Special loans for energy improvements (including SRF “green” projects)
- Rebates
- Tax Credits (for those eligible)
- Net Metering and Power Purchase Agreements (PPA)

# How the Money Is Handled

- Issues to consider:
  - It may depend on your water system's internal policies and/or how your energy bills are paid
  - A clear, consistent policy is key for the long-term success of the revolving fund

## Slide 24

---

**TDR9**

May want to split into two slides.

Tucker, David Rexford, 3/31/2016

# How the Money Is Handled

- Ways for the money to be handled:
  - Within your finance office
  - Each project repays the fund
  - The budget includes a certain amount of money to be re-appropriated into the fund each year

## Slide 25

---

**TDR10**

May want to split into two slides.

Tucker, David Rexford, 3/31/2016

# M&V of Projects

- From a finance and management perspective, the issue is how to determine repayments into the fund.
  - Actual savings
  - Estimated savings
  - Annual lump sum, regardless of savings

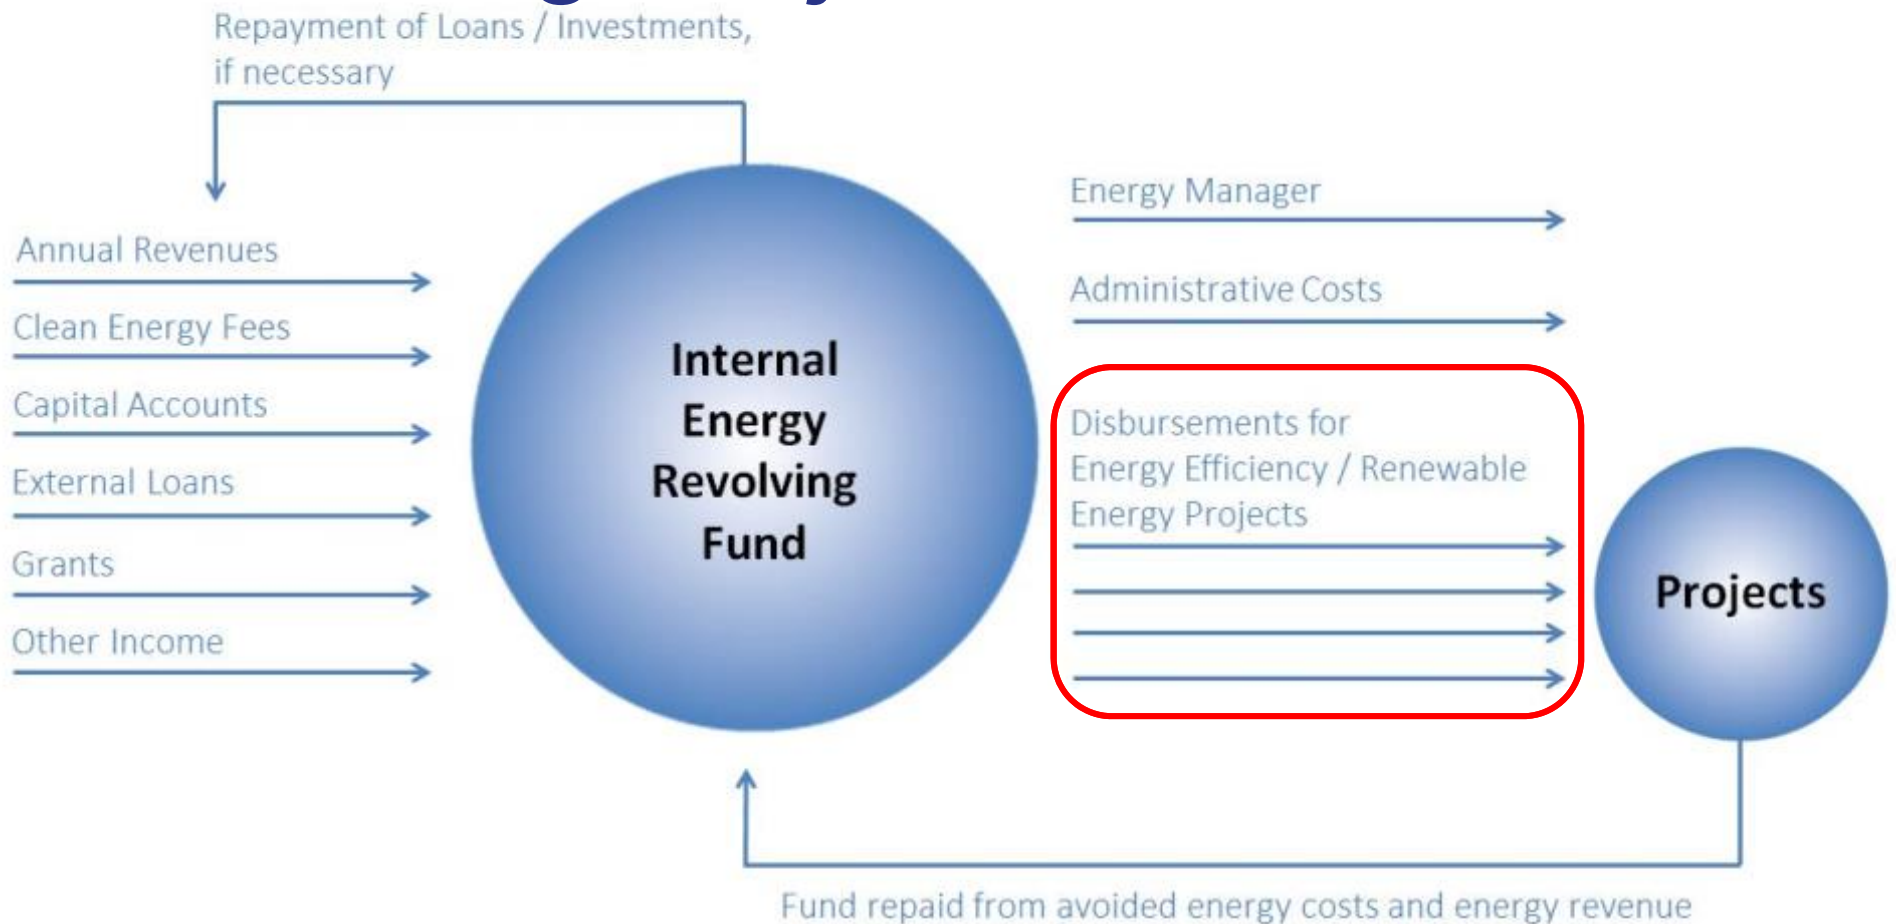

# M&V of Projects

- If repayments are tied to actual savings (note: actual energy savings  $\neq$  actual dollar savings), you need a pre-determined M&V system.
- If repayments are on a fixed schedule based on estimated savings, M&V is not relevant for repayments.

# Choosing Projects

# Choosing Projects

- Based on audits of water system facilities or other pre-determined criteria
- Energy efficiency tied to other capital improvements
- Applications from staff
- “Spreading the wealth”

# Choosing Projects

# IERF Replenishment

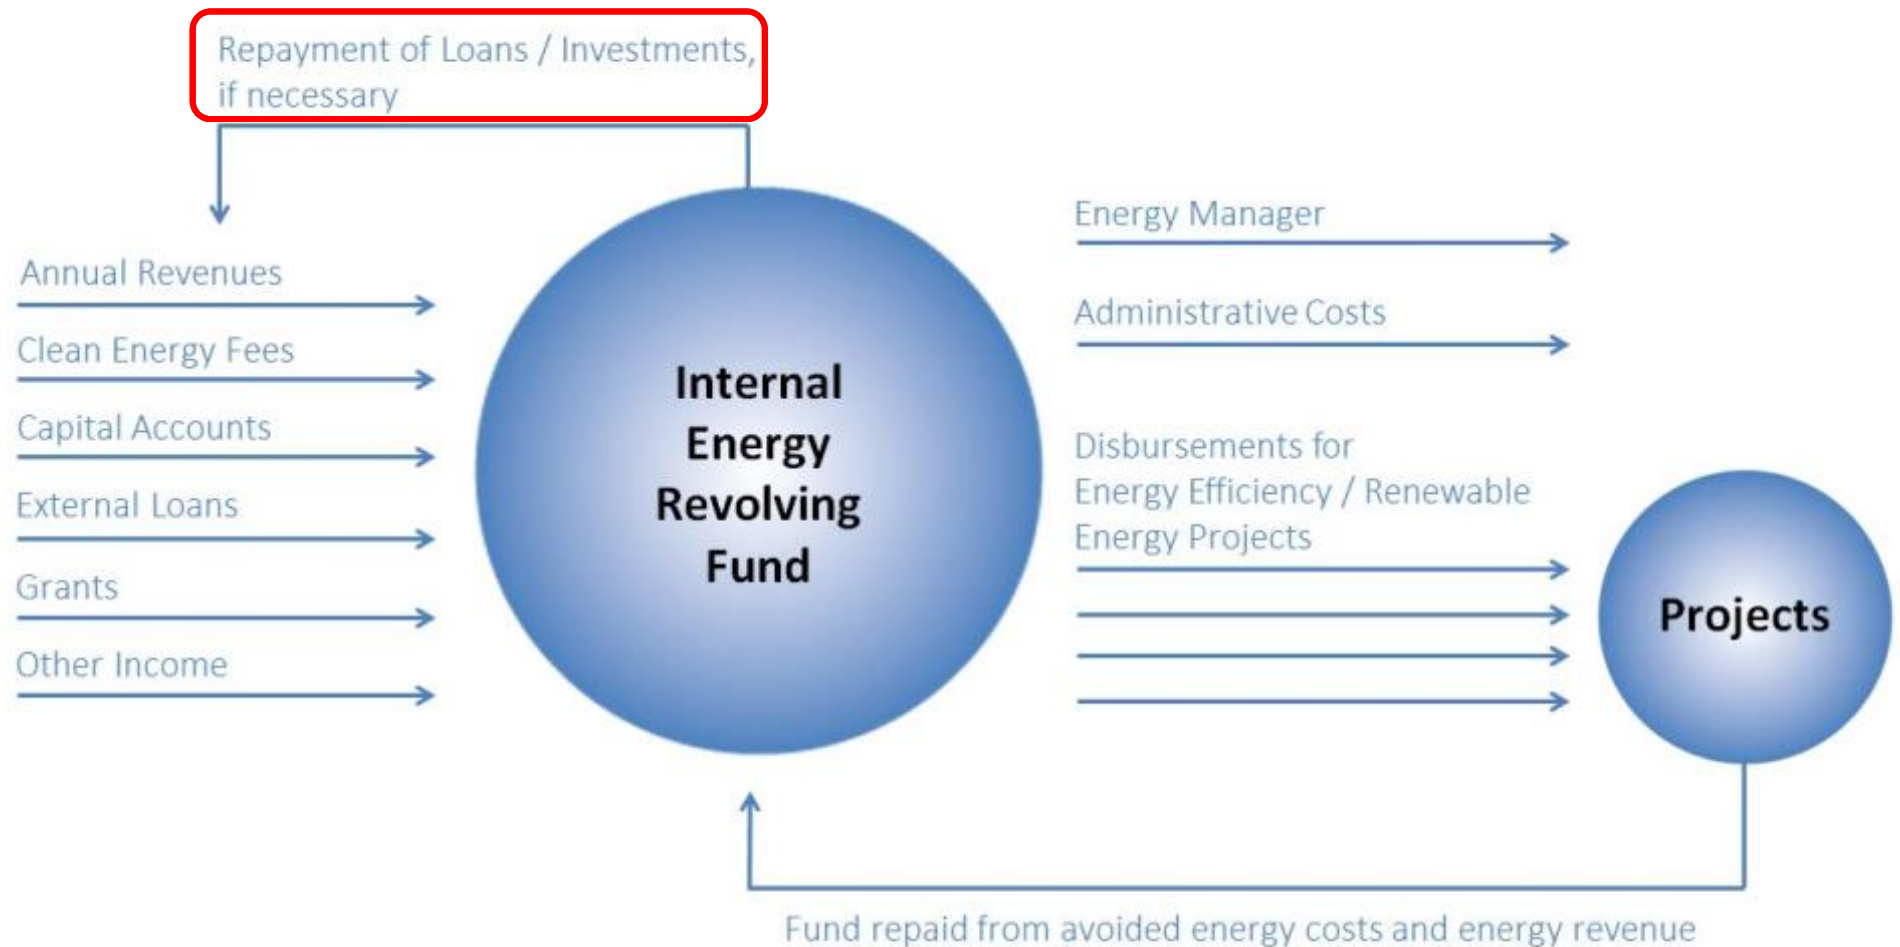

# IERF Replenishment

- Avoided energy costs
  - Repaid up to, or exceeding, 100% of project costs.
  - Note: You may wish to ask for more than 100% to cover administrative / overhead costs.
- Adding new money to the fund
- REC sales

# If You Borrow to Seed the Fund

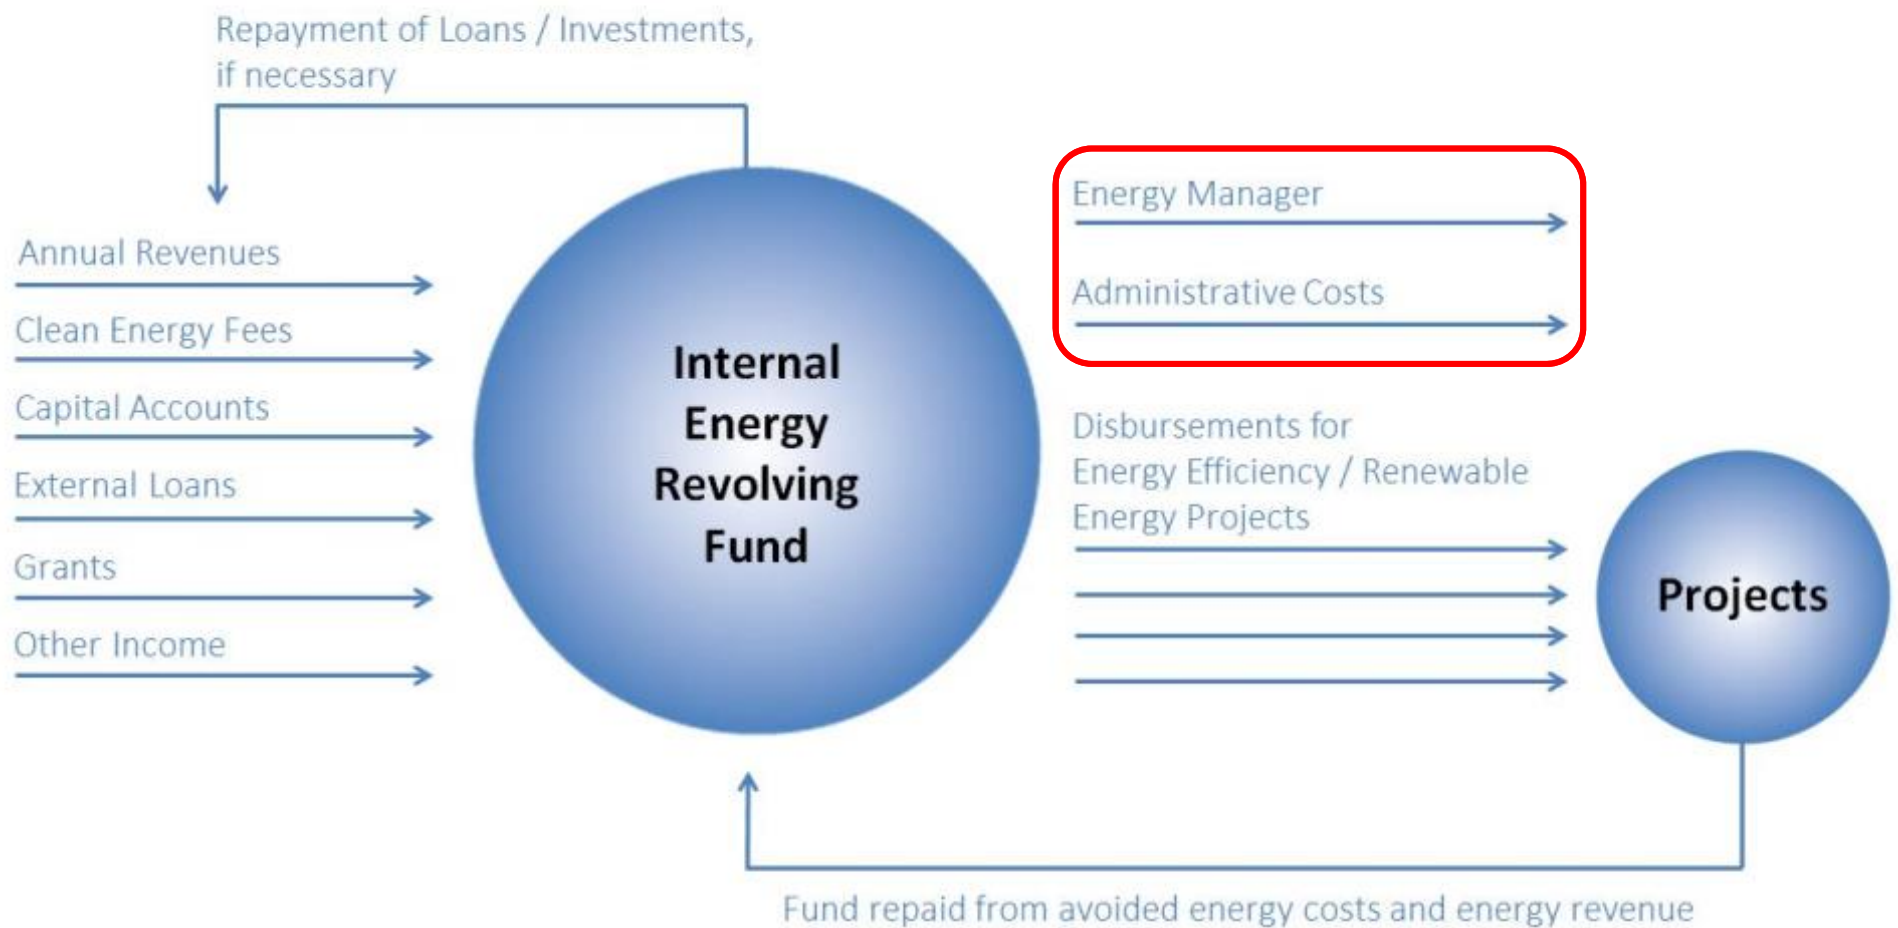

# If You Borrow to Seed the Fund

- Avoided energy costs can be used to repay your debt, and whatever is remaining replenishes the fund
- Have a Plan B

# IERF Administration

# IERF Administration

- This costs money!
- Can be paid out of the avoided energy costs

# Shell game?

# Management Benefits

- Structures incentives for energy improvements
- Rewards leadership and innovation
- Creates a process for choosing projects

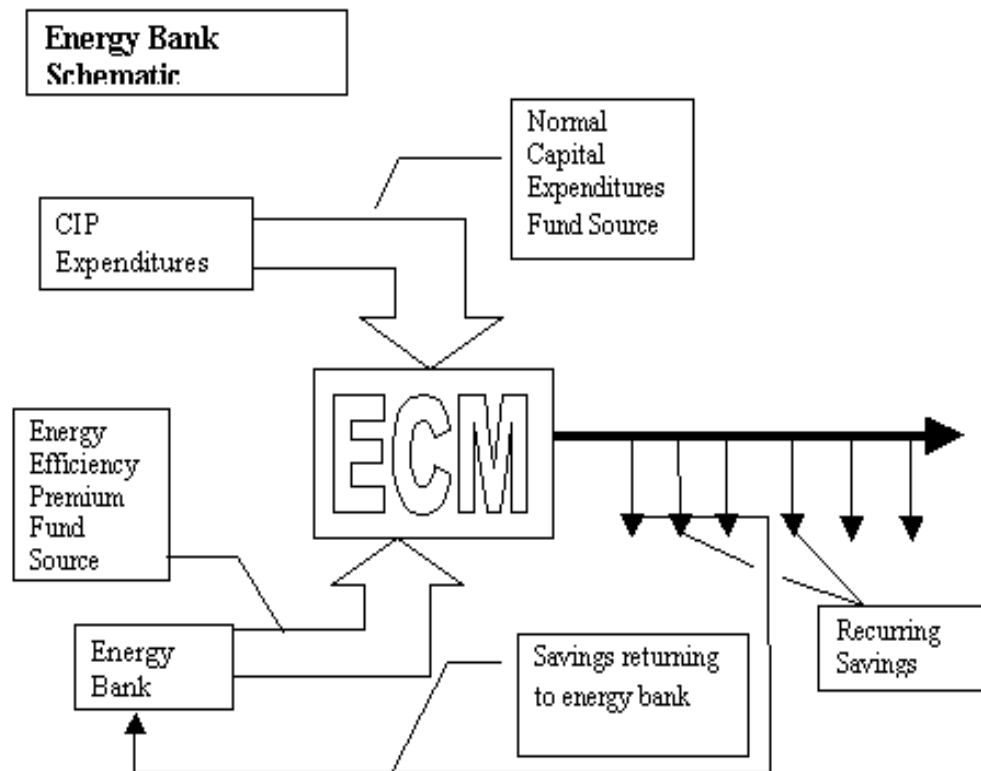

# Examples

# Town of Chapel Hill's (N.C.) Energy Bank

- Established: 2006
- Seed money amount: \$500,000
- Seed money source: Bond
- Fund maintenance: 100% of energy savings

<http://www.townofchapelhill.org/Home/ShowDocument?id=4263>

# Town of Chapel Hill, N.C.

- Population: 57,233 people.
- History: Residents voted in 2003 referendum in favor of \$500,000 bond for creation of an Energy Bank.
- Purpose: Acquire and install energy efficient equipment in public buildings, rolling avoided energy costs back into the bank for future project investments.
- Limitations: Can't be used for new construction. Any refits must meet LEED silver standards. Allows the Town to achieve multiple goals by careful design of the fund.

# Town of Chapel Hill, N.C.

- Policy requires projects over \$100,000 must have an energy audit.
  - Fund can't be used for these audits.
- Payback on any project can't be over seven years.
- Example: A \$95,000 project to upgrade to a new HVAC system with a state-of-the-art energy management control system.
  - Simple payback period of 7 years.
- Other examples include lighting, heating, A/C, and other building machinery / equipment.

# Hillsboro, OR: Sustainability Revolving Fund

[Home](#) [Partnerships](#) [Solutions](#) [Webinars](#) [Newsroom](#) [Get Involved](#) [Summit](#) [SWAP](#) [About](#)

[Home](#) > [Solutions](#) > [Implementation Models](#) > Sustainability Revolving Fund

**COMMUNITY SIZE**  
Small suburban, population 93,000

**GOAL**  
To achieve a 60% reduction in City facility EUI by 2030, based on a 2007 baseline

**BARRIERS**  
Inconsistent access to capital for energy efficiency projects

**SOLUTION**  
Creation of Sustainability Revolving Fund (SRF), a dedicated internal fund established to finance projects that address one or more goals in the City's Sustainability Plan

**OUTCOME**  
The SRF was originally seeded and is now replenished with savings from energy efficiency projects. Since its inception in 2010, the fund has provided more than \$45,000 to support five projects that will produce an estimated \$24,000 in annual cost savings. In addition to energy savings, the SRF has served to advertise the benefits of the sustainability program to City employees, increased awareness of the savings potential achieved through energy efficiency, and successfully highlighted the City's innovative approach to financing

**Implementation Model:  
Sustainability Revolving Fund**

**OVERVIEW**  
The City of Hillsboro, OR, has more than doubled in population since 1995, making it the fifth-largest city in the state. Hillsboro strives to be a model of energy efficiency and sustainability. In 2010, the Hillsboro City Council approved the City's first Sustainability Plan which called for a 60 percent reduction in City facility energy use by 2030. The Plan builds on the [City's Strategic Plan](#) and [2020 Vision and Action Plan](#).

[More](#)

[Share](#)

# Hillsboro, Oregon

- Population: 93,000 people.
- City goal: achieve 60% reduction in city facilities' Energy Usage Intensity by 2030. (2007 baseline)
- Barrier: Access to capital for energy efficiency (E.E.) projects.
- Solution: Created a Sustainability Revolving Fund in 2010 to finance E.E. projects.
- Source: <http://betterbuildingssolutioncenter.energy.gov/implementation-models/sustainability-revolving-fund#sthash.C8yfP6R4.dpuf>

# Hillsboro, Oregon

- Since inception, fund has provided over \$45,000 in funding for E.E. projects.
- These projects will produce an estimated \$24,000 in annual avoided energy costs.
- The five projects thus funded include:
  - GPS vehicle tracking (parks fleet)
  - Lighting upgrades (maintenance HQ)
  - Propane walk behind mowers (parks fleet)
  - Pool underwater lighting upgrade (aquatic/rec. ctr.)
  - Energy controls (library)

# Additional Local Govt. Examples

- Union County, N.C.
  - Used American Recovery and Reinvestment Act grant funds starting in 2009 to establish a “Revolving Energy Fund.”
  - Funding lighting, HVAC, and solar thermal projects.
  - Expecting to avoid \$210,000 annually in energy costs.
- Ann Arbor, Michigan
  - Established a “Municipal Energy Fund” in 1998 to pay for lighting improvements, LED traffic signals, solar photovoltaic panels, etc.
  - Annually, over 1,000 MW of electricity usage has been avoided, as well as 270 MCF of natural gas.
  - Annual reductions of 180 metric tons of carbon dioxide emissions.

# Examples: Colleges & Universities

- Over 80 U.S. colleges / universities have employed the IERF approach.
- For example, at the University of North Carolina at Chapel Hill, two such funds have been established:
  - The university's Green Revolving Fund (GRF), and
  - The Renewable Energy Special Projects Committee Revolving Fund, run by dedicated UNC students.
- One GRF-funded project outfitted a campus building with LED lighting:
  - Avoided \$1,000,000 in energy and maintenance costs across 20 years.
  - Less than a 3 year simple payback period.
- Also, Harvard University's Green Revolving Fund has a \$12 million fund:
  - Has supported nearly 200 projects.
  - Has yielded \$4 million in avoided energy costs annually.

# Other Considerations in Whether to do an IERF

- Energy prices (e.g. 9 cents/kWh vs. 54 cents/kWh)
- Demand charges (e.g. high peaking costs and/or demand ratchets vs. no demand charges)
- Effects of topography (e.g. on pumping costs)
- Sufficient administrative support for operating and maintaining the fund

# Pros and Cons: IERF vs. ESPC

| ISSUE                                     | IERF (Internal Energy Revolving Fund)             | ESPC (Energy Savings Performance Contract)             |
|---|---|--|
| Simple Payback Periods (SPP) of Projects? | Probably need short SPP for all projects.         | Can bundle together shorter and longer SPP's.          |
| Staffing Challenges?                      | Will need to do all staffing internally.          | Performance contractor works with your staff.          |
| Formal Contracts Required?                | Not necessarily. Depends on situation.            | Definitely, and probably at least three separate ones. |
| Reporting Requirements?                   | Probably just those internal to the organization. | More partner organizations may mean more reporting.    |
| Energy Conservation Project Expertise?    | Will need to be self-driven by your organization. | Performance contractor brings extensive expertise.     |

The way that drinking water and wastewater systems pay for energy improvements in the United States is changing – including for small drinking water systems (serving 10,000 or fewer people). As has often been mentioned on the EFC's blog, the days of huge federal grants for construction of water and wastewater systems are [long past](#). Since an energy improvement is a kind of
