Introductory Asset Management: Optimizing Asset Life for Sustained Operations: Training for Arizona Wastewater Operators

1:00 pm - 4:00 pm MST VIRTUAL

With limited revenues, aging infrastructure, and regulatory obligations to meet, a comprehensive approach to managing assets is vital. You may not be sure which asset(s) to replace when funds are limited. Asset management can help you solve these problems and more.

In this training, you will learn how to develop an inventory using EPA-provided templates; identify critical assets; make decisions about how to operate, maintain, repair, and replace those assets; and set goals for level of service at a sustainable cost.

Presenter: Maureen Kerner, Associate Director, Environmental Finance Center at Sacramento State; Ella Ban, Environmental Specialist, Environmental Finance Center, Sacramento State

CEU credits may be available to Arizona Water and Wastewater Operators.
