cooperative agreement with EPA.

Water System Revenues

© 2004 Ted Goff

“This part of the plan will be funded with all the unused money we must have laying around someplace.”

Session Objectives

- Understand how to pay for the costs of running your water system
- Look more closely at your rates

How much money do you need?

Systems Love Low Rates, but...

“Once again, the [City’s] Water Department proved to have some of the lowest water and sewage rates in the state.”

Low Water and Sewer Rates
January 8, 2007

Once again, the City of [City Name] and sewage rates in [City Name] recent survey conducted by [City Name] providers to evaluate [City Name] rates residents pay. [City Name] City of [City Name] is proud to say, based on [City Name] household, the City has the third lowest water and sewage rates. [City Name] water bill of \$15.38, and sewage bill of \$10.36. As a result, [City Name] proved to have the third lowest combined residential water and sewage rates, of the 63 polled.

The commercial rates were also compared among the same providers, based on 150,000 gallons per month. [City Name] has the lowest sewage, as well as the lowest combined water and sewage rates of those polled. The average commercial monthly sewage bill is \$222.00, with the combined [City Name]

Will it provide sufficient cost recovery?

What exactly does this include?

Are we following the applicable laws?

Will revenues be resilient to changing water demands?

Are we allocating the costs to the right customers?

Do these rates send the right signals to our customers, based on our objectives?

Will our customers understand these rates?

Will our customers be able to pay these rates?

Learn essential background information about rates

Determine critical characteristics of your utility and community

Design the most appropriate rate structure

Cost-of-Service Study
Compute the rates using projected costs and revenues

Re-evaluate/adjust rate structure to fit primary objectives

The Process of Setting Rates

Basic Principles

- Aim at full cost pricing
- Set equitable rates
- Share rate structure with customers
- Rate should be easy to understand
- Rates should be examined annually
- Consider fixed costs vs. variable costs
- Allow for reserve account(s)
- *Promote water conservation?*
- *Promote economic development?*

“Full Cost Pricing”

- Operations & maintenance expenditures
- Taxes and accounting costs
- Contingencies for emergencies
- Principal and interest on long-term debt
- Reserves for capital improvement
- Source water protection

Ways To Pay

- Pay as you go (current receipts)
- Save in advance and pay
- Pay later (someone loans you money)
- Grants (let someone else pay)

Grants Aren't Completely Free Money

- Application for the grant can be expensive – staff time and money
- Applications can take months to process
- Often lots of strings attached
- Often require a percentage match
- Lots of competition
- Difficult to sustain

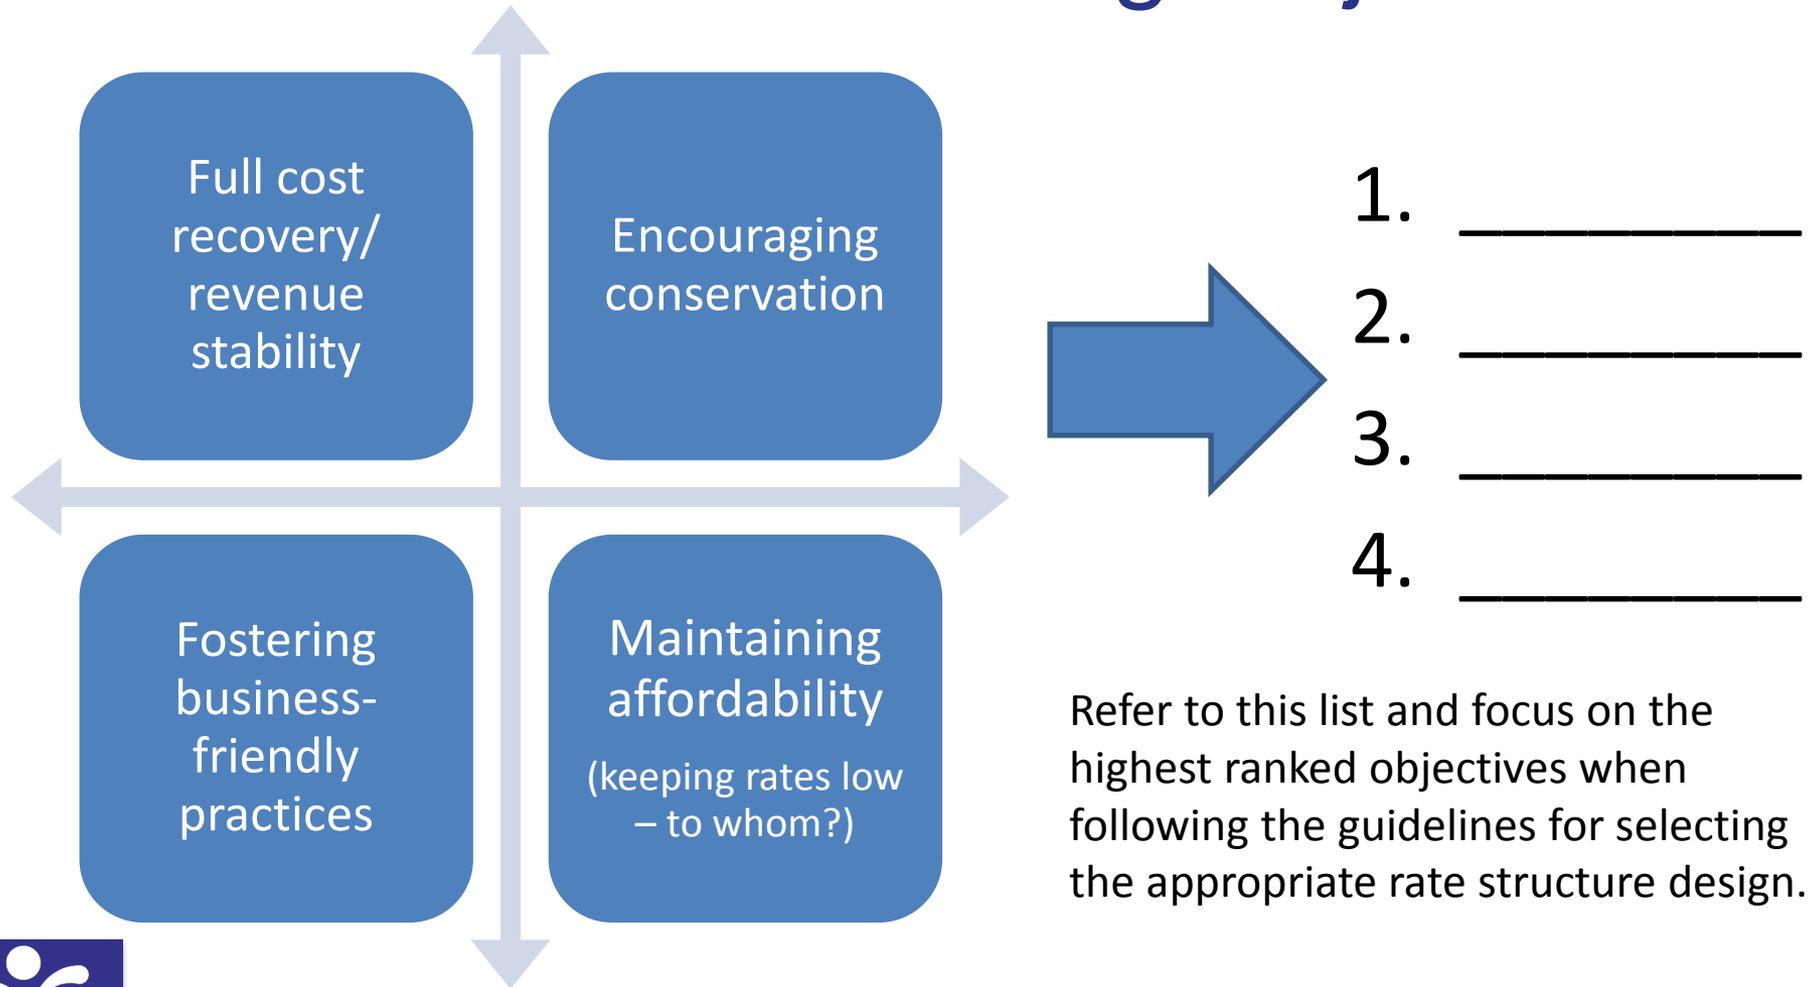

Rates & Monthly Charges

- What type of rates and monthly charges do you levy?
 - Charges based on metered usage?
 - Flat monthly charges?
 - Something else?
 - Nothing?

Rank Your Rate Setting Objectives

Refer to this list and focus on the highest ranked objectives when following the guidelines for selecting the appropriate rate structure design.

What are your rate setting objectives?

Elements of Rate Structure Designs

1. Customer classes/distinction
2. Billing period
3. Base charge
4. Consumption allowance included with base charge
5. Volumetric rate structure
6. (If applicable) Number of blocks, block sizes and rate differentials
7. (Optional) Drought Rates
8. Frequency of rate changes

Customer Classes/Distinctions

- One rate structure for all
- Target: All are equal

Customer Classes/Distinctions

- Separate rate structure for residential, irrigation, commercial, industrial, governmental, or wholesale customers
- Target: Specific type of customer

Customer Classes/Distinctions

- One rate structure, but with different base charges based on meter size
- Target: Non-residential or multi-family housing

Customer Classes/Distinctions

- One rate structure for all, but with blocks that implicitly only target non-residential use
- Target: Non-residential

Customer Classes/Distinctions

- Different rates for customers outside municipal limits/service area boundaries
- Target: “Outside” customers

Customer Classes/Distinctions

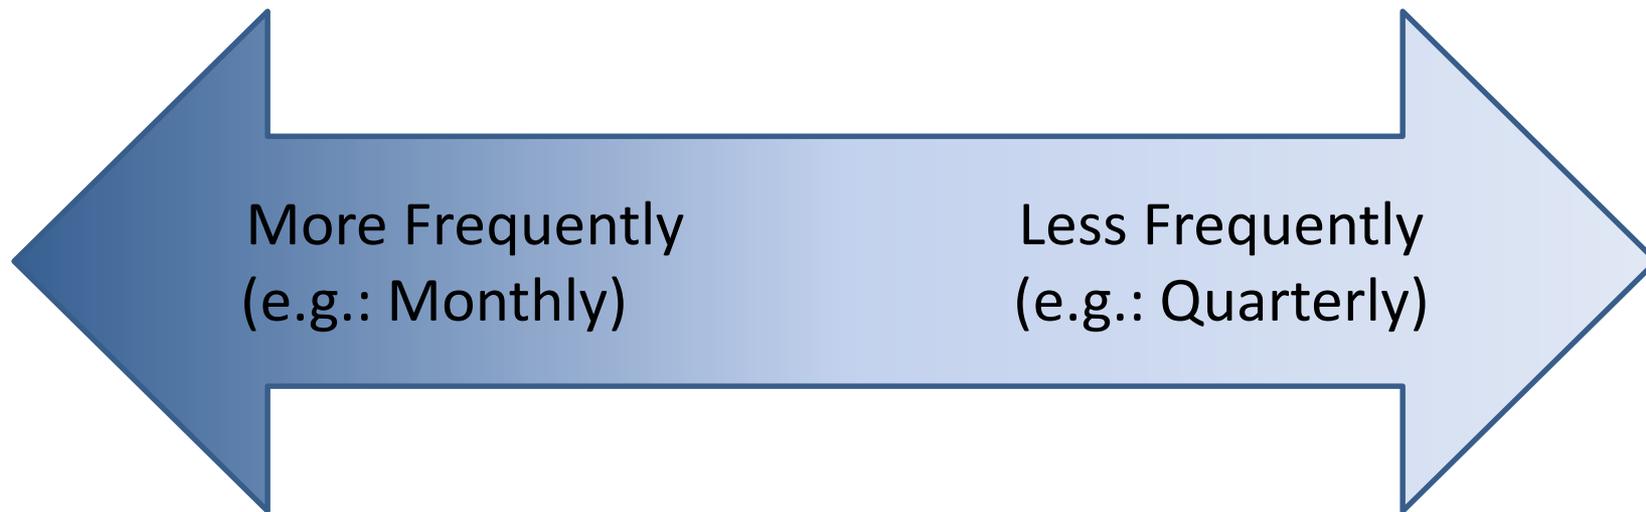

- Negotiated rate structure with individual high-use customers (typically an industrial customer)
- Target: Only one customer

Mark your Customer Classes on your sheet

Billing Period

Suggestion: Use a monthly billing period if you can afford it

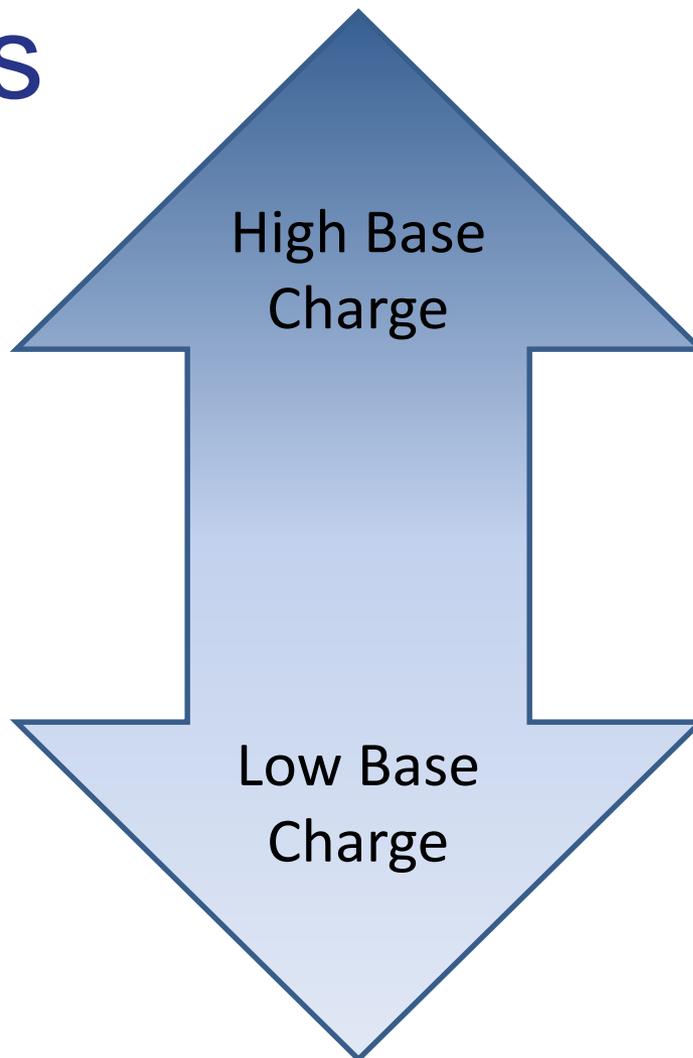

Mark your Billing Period on your sheet

Base Charges

*Suggestion:
Smaller utilities
should lean
towards higher
base charges*

Mark your Base Charge on your sheet

Consumption Allowance with Base Charge

Do not
include any
(0 gallons)

Include some
amount
(e.g. 1,000 gal/mo)

Include high
amount
(e.g. 3,000 gal/mo)

Suggestion: For systems with low base charges, do not include any consumption allowance. For systems with high base charges but wish to encourage conservation, keep consumption allowance low, if any.

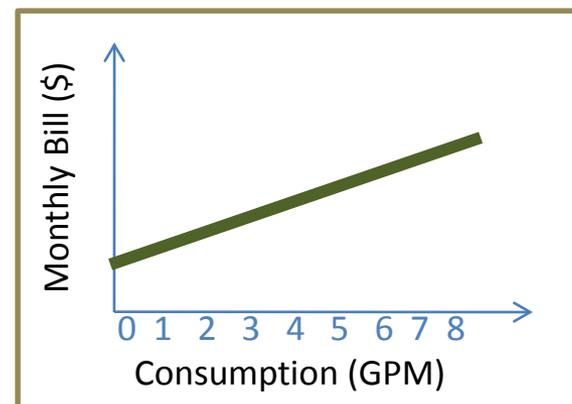

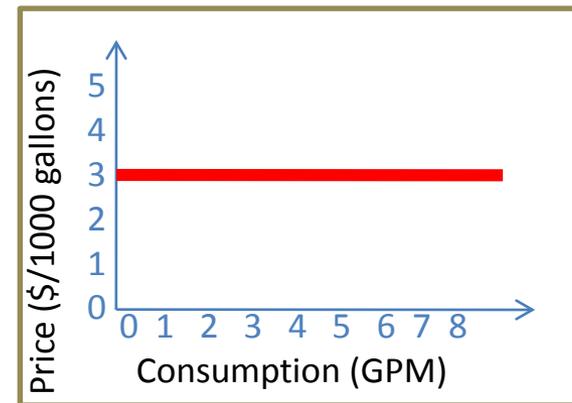

Mark your Consumption Included in the Base Charge on your sheet

Volumetric Rate Structure

Uniform (“Flat”) Rates

- Fair and simple

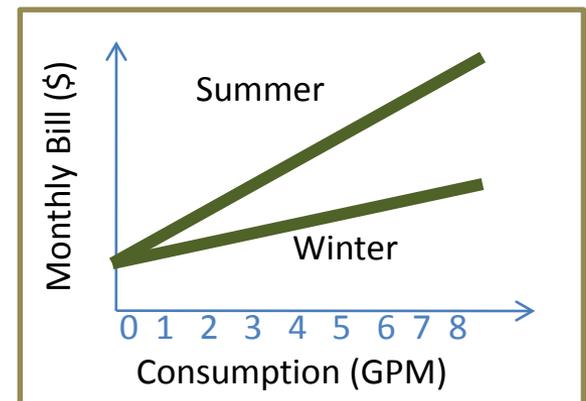

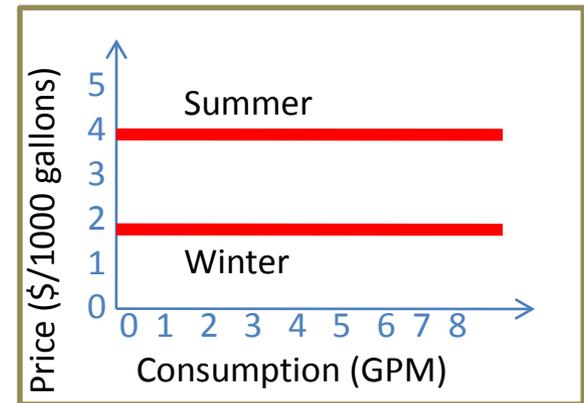

Volumetric Rate Structure

Seasonal (Uniform) Rates

- Conservation-oriented, good for seasonal communities

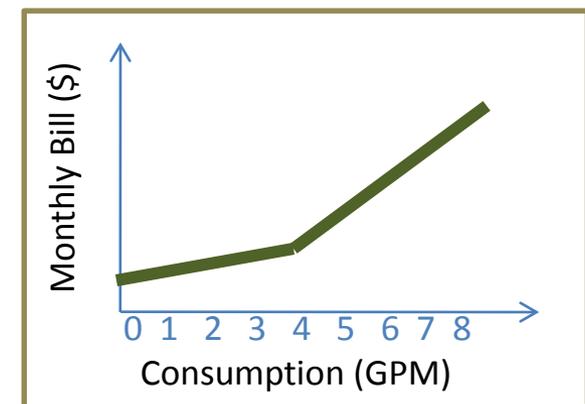

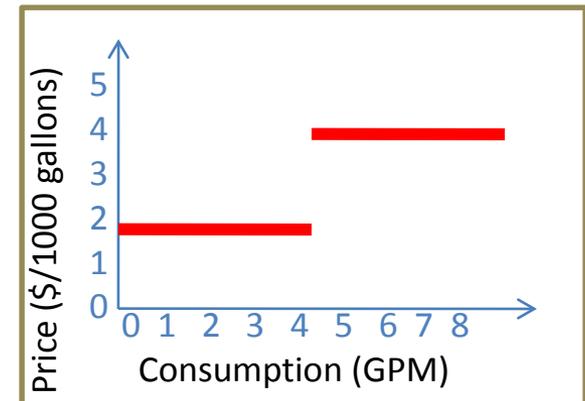

Volumetric Rate Structure

Increasing Block Rates

- Conservation-oriented
- Consider large families

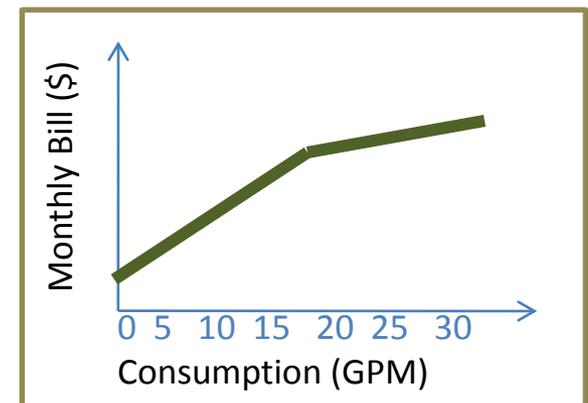

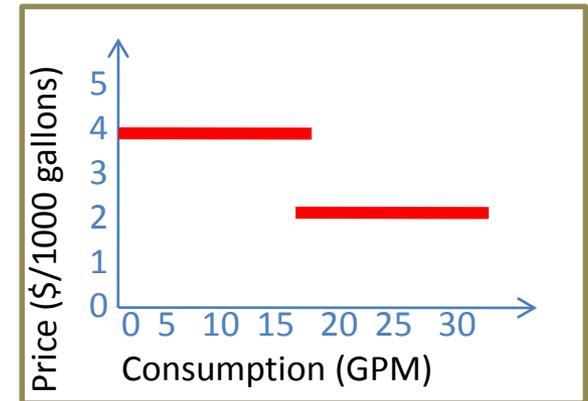

Volumetric Rate Structure

Decreasing Block Rates

- Provide price break for large users (e.g.: commercial)
- Do not use for residential

Mark your Rate Structure on your sheet

(If Applicable) Block Designs

For block rate structures to be effective:

- Decide on the correct number of blocks
- Decide on where the blocks should end/start
- Set significant rate differentials between blocks

(If Applicable) Block Designs

For block rate structures to be effective:

- Keep in mind your base charge and consumption allowance
- Meter reading must be punctual, and meters must be replaced frequently
- Think about large families

If you have block rates, mark
your Number of Blocks on your
sheet

(Optional) Drought Rates

- Prepare for drought in advance: create an ordinance *in advance* to give the utility the ability to raise rates temporarily during a water shortage scenario (sometimes called “drought surcharges”).

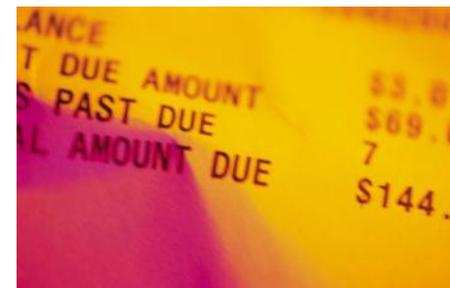

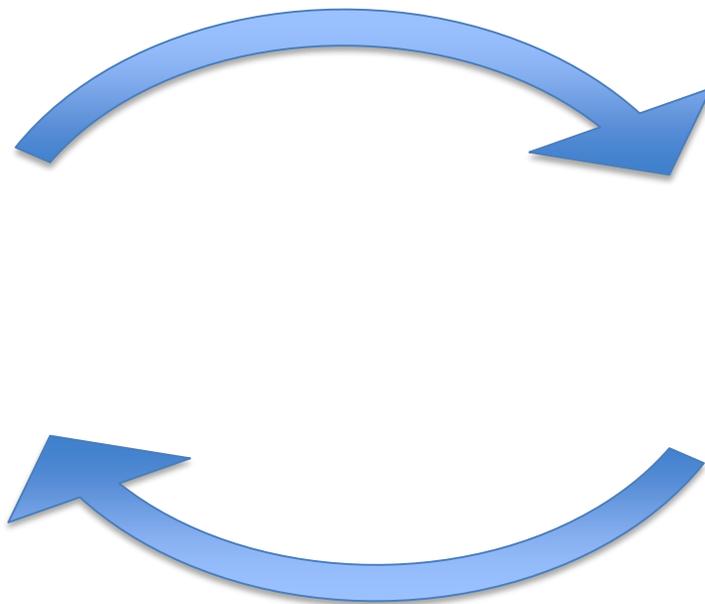

Mark whether you have Drought Rates on your sheet

How Rates and Usage Interact

Set rates based on projected water use

Raising rates lowers water use

Rule of thumb: water use declines ~2-6% as rates increase 10%

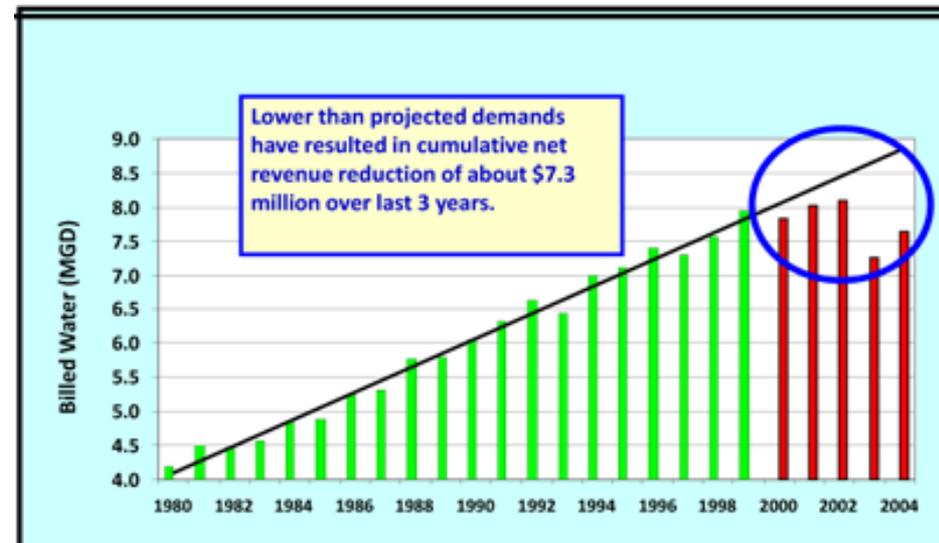

Background Information:

How Rates and Usage Interact

Public Perception:

Utility Reality:

Source: Fayetteville Observer 2/6/2004

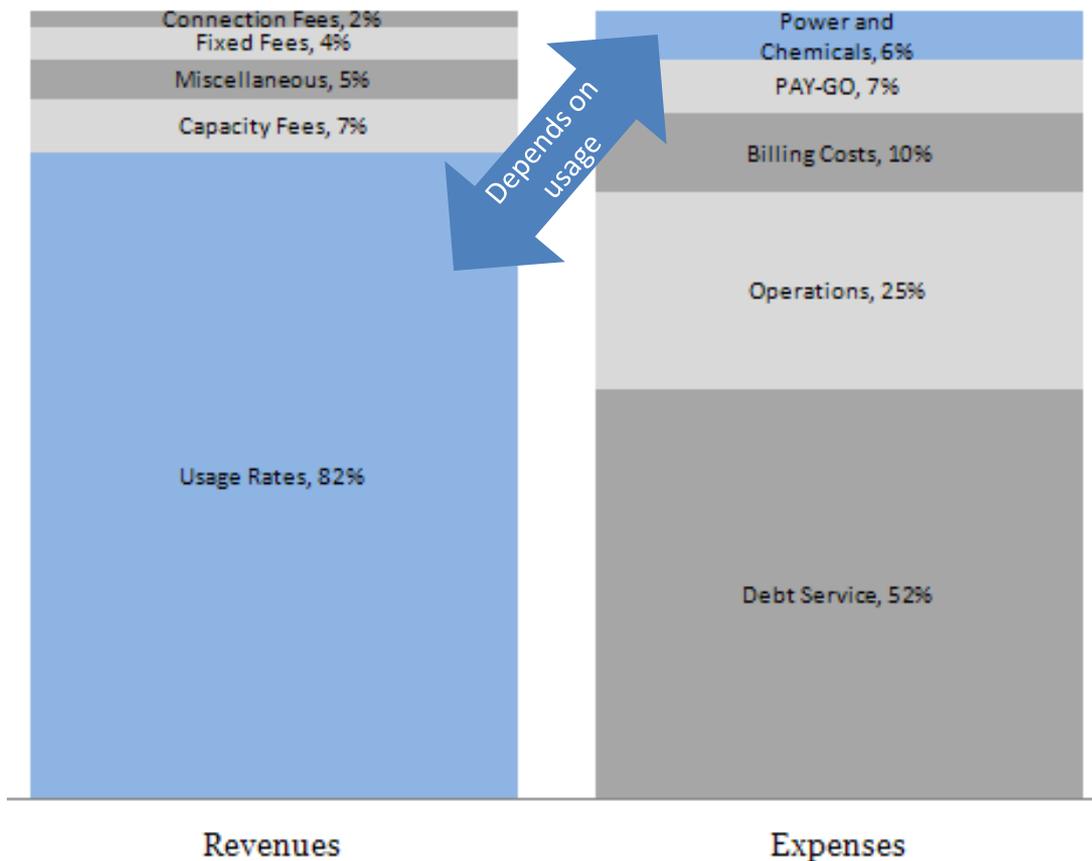

Source: Orange Water & Sewer Authority

Why Does this Happen?

Utilities' costs are mostly *fixed*, not dependent on the amount of water sold/used by the customers. But the majority of revenues come from the amount of water sold. If customers conserve, revenues drop significantly but not costs.

Revenue and Expenses for Charlotte-Mecklenburg Utilities in a Given Year

Source: CMU Director Doug Bean's presentation to the Charlotte City Council on December 1, 2008.

Frequency of Rate Changes

- Always review your rates annually (recommended)
- Review your financial health indicators annually, and then review your rates if any of the indicators reflect poor financing
- Perhaps less politically charged option: Raise rates each year automatically based on inflation

Mark your Frequency of Rate Review on your sheet

Frequency of Rate Changes

- *Important: Avoid maintaining low rates at the expense of your utility's financial health. It will either lead to a sudden, massive rate increase in the future or to failing systems and endangering public health.*

Look at your rate setting objectives. Look at your rate structure. Do they line up? What changes do you want to consider?

Scenario: Rural Water Utility With Naturally High Costs and Excess Capacity, Wants to Maintain Affordability

1. Customer class: possibly create separate residential class.
2. Billing period: use monthly.
3. Base charge: if majority of customers use little water, charge fair base charge and include allowance. Otherwise, low base charge, and shift high rates to high volume users.
4. Consumption allowance: if including, set at a lifeline amount (~2,000 gallons/month).
5. Volumetric rate structure: probably use uniform
6. (If applicable) Block design: if using, first block at least 4,000 GPM, depending on your customers' consumption.
7. (Optional) Temporal adjustments: none.
8. Frequency of rate changes: annual.

Note: Set up a customer assistance program: <http://efc.sog.unc.edu/reslib/item/customer-assistance-program-costing-tool-north-carolina>.

Water and Sewer Rates Analysis Model

Version 2.7 (updated March 24, 2014)

20-year fund balance estimates under proposed new rates vs. existing rates: compare side-by-side
Uniform or block rates Residential and non-residential rates Changes to customers and demands

INSTRUCTIONS

- 1) Click on tabs at bottom of screen to navigate to different pages.
- 2) On the **"Data Input 1"** tab enter current and new rate details in the dark green cells.
- 3) On the **"Data Input 2"** tab enter current consumption levels, utility finances, and other assumptions in the dark green cells.
- 4) On the **"Charts"** tab, see projections of the End of Year Fund Balance, and input a Fund Balance Policy in the dark green cell at the top of the page.
- 5) Compare new rates to existing rates in **"Compare Monthly Bills"** and their impacts on costs and revenues in **"Existing Rates"** or **"New Rates"**.

Rate Structure		2012	
		Block	Block
Water Base Rate			\$10.00
Water:			
Block Rate 1 (\$1,000 gal)	2,001 gal/mo	2,000 gal/mo	\$1.00
Block Rate 2 (\$1,000 gal)	5,001 gal/mo	5,000 gal/mo	\$2.00
Block Rate 3 (\$1,000 gal)	7,001 gal/mo	7,000 gal/mo	\$3.00
Block Rate 4 (\$1,000 gal)	12,001 gal/mo	12,000 gal/mo	\$4.00
Final Block Rate (\$1,000 gal)	12,001 gal/mo		\$5.00
Sewer Base Rate			
Sewer:			
Block Rate 1 (\$1,000 gal)	2,001 gal/mo	2,000 gal/mo	\$1.00
Block Rate 2 (\$1,000 gal)	5,001 gal/mo	5,000 gal/mo	\$2.00
Block Rate 3 (\$1,000 gal)	7,001 gal/mo	7,000 gal/mo	\$3.00
Block Rate 4 (\$1,000 gal)	12,001 gal/mo	12,000 gal/mo	\$4.00
Final Block Rate (\$1,000 gal)	12,001 gal/mo		\$5.00

Starting Fund Balance		FY2013	
Existing	12,235,000 (gal/month)		
	5,500 (gal/month)		
Fund Balance at the Beginning of FY2013		\$ 1,750,000	
Utility Expenses Excluding Debt Service			
		During FY2013	
Salary and Wages, Including Part-Time and Contract		\$	200,000
