Addressing the nicer homes

Low quality rental units

Tarps covering leaking roofs is common

Burned homes are common

Vacant structure collapse

Clogged Line

Lead gooseneck connector

Resident attempts to install their own piping

Phase IV

- City-wide Water Improvements
- Included using water tower overflow prevention valves
 - Could not fully charge the water towers at one end of town because they would overflow at the other end of town
 - City used the appropriate parts from decommissioned water towers within town that had become obsolete
 - We counted the parts and the City staff's hours to install them as an in-kind contribution

Phase IV (cont'd)

 We also noted that small lots also show poverty and how easy it is for fire to spread. This is especially true in mobile parks and public housing, rental apartments, or in the heavily wooded areas. Many low income households don't have tools to fight back vegetation. Abandoned homes are reclaimed by nature. This creates a network of wood that can spread fires.

Proximity of Mobile Homes to One Another

Trees over people's homes that can spread fire

Trees connecting abandoned lots to a network of potentially fire spreading wood

Local Boys and Girls Club
